SMART START IN-HOM™

SMART START IN-HOM™ ALCOHOL MONITORING SYSTEM

Affordable, Accurate, and Portable Alcohol Monitoring 7 days per week

The SMART START IN-HOM unit is an affordable alternative for the offender who needs alcohol monitoring. The IN-HOM monitor is an alcohol specific fuel cell based device equipped with a camera allowing for photo identification of the person submitting the test.

The device is portable and simple to use. The client picks it up at a local Smart Start Service Center or approved location, takes the unit home or another location, plugs it into a wall outlet, and blows into the device when a test is requested.

Most probation orders already include the following language: "No Consumption of Alcohol" or "No Excessive Use of Alcohol." IN-HOM fills the gap between intensive monitoring options such as SCRAM, and minimal testing from traditional PBT based testing programs that only test once per day, if that often.

\$75 Standard Unit with one download per month → Monthly equipment lease paid by the client plus applicable tax.

\$90 Standard Unit with download every 2 weeks (\$15-additional download) – Monthly equipment lease paid by the client plus applicable tax.

Key Features of the Smart Start IN-HOM Models

- ★ **Alcohol Specific Sensor:**
The IN-HOM device utilizes a fuel cell sensor which is used in many evidential breath alcohol testing devices. The fuel cell technology makes this device "alcohol specific" thereby eliminating false positive readings.
- ★ **Photo Identification**
The IN-HOM takes a digital picture every time a test is taken. This allows the monitoring authority to see a picture of the person that submitted the test, along with the date, time, and BAC level.
- ★ **Programmable Test Periods**
There are three (3) standard default testing periods: Sunday – Saturday 5am-8am; 5pm-8pm and 10pm-12am. Up to ten (10) test windows per day can be scheduled.
- ★ **Random Testing Periods**
The IN-HOM will allow testing at any time. A monitoring authority can contact the client and ask them to test randomly.
- ★ **Events Log**
The IN-HOM system records, dates and time stamps all relevant events such as breath test results, skipped tests, tampering, power loss, and retest activity.
- ★ **Affordable**
Priced as low as \$75 per month (**Only \$2.50 per day**). Substantially less expensive than other alcohol testing technologies.
